2 NEAREST HIGH-VOLTAGE INFRASTRUCTURE

#	DISTANCE	VOLTAGE	LINES	NAME	FACILITY TYPE
1	0.56 mi	230 kV	4	line tap point * WILSONVILLE, OR	line tap point
2	0.57 mi	230 kV	3	line tap point * WILSONVILLE, OR	line tap point
3	0.61 mi	500 kV	5	PEARL † WILSONVILLE, OR	utility substation
4	0.66 mi	115 kV	3	OREGON CITY WILSONVILLE, OR	utility substation
5	0.66 mi	115 kV	3	line tap point * WILSONVILLE, OR	line tap point

n/r = not recorded in source data · search radius 10 miles

1 unnamed record · 0.56 mi · 230 kV

3 PEARL · 0.61 mi · 500 kV †

5 unnamed record · 0.66 mi · 115 kV

2 unnamed record · 0.57 mi · 230 kV

4 OREGON CITY · 0.66 mi · 115 kV

Aerial imagery: USDA NAIP imagery via USGS The National Map — Public domain (USDA/USGS), retrieved 2026-09-27. Marker positions are the source dataset's own coordinates; where records coincide, markers are separated slightly so each stays visible. Distances in the key are measured, not scaled off this drawing. Not a survey.

* **Not necessarily an interconnection point.**

- **line tap point** — Named TAP<id> in the source data — a junction on a transmission line rather than a load-serving substation. Not normally an interconnection point.

† **Publicly-available interconnection queue data for this substation is appended to the bottom of this report.**

- Distances are straight-line (haversine), **not** engineering route length.
- HIFLD does not record substation ownership. Proximity does not imply availability — a nearby facility may be a customer-owned on-site substation serving an adjacent property.
- 3 of 5 carry a placeholder name in the source dataset.

LOCAL MORATORIA

None recorded for these jurisdictions

Census places this point in Washington County · Beaverton-Hillsboro CCD · Wilsonville city. This dataset tracks moratoria only — not project proposals, planning-commission reviews, or permanent zoning rules — so active local debate over a specific project will not appear here.

2 other instruments recorded within 25 miles (2 active or extended), measured to jurisdiction centroids.

Recorded is not the same as applicable, and the dataset is a lower bound: an absence here is not evidence that no moratorium exists. Detail and scope caveats: Appendix B.

4 DATA COMPLETENESS

6 of 6 expected fields resolved

Resolved: location, franchiseUtility, nearestSubstation, substationVoltage, watershed, floodZone

5 WHAT THIS REPORT DOES NOT TELL YOU

- Available load capacity at any substation. No utility publishes this for large loads; this report is a screening aid, not a system impact study.
- Interconnection cost or timeline for a specific project.
- Zoning approval likelihood.
- Interconnection queue data is appended to the bottom of this report when a substation listed above is an exact name and county match against the queue dataset. Visit the [Queue Wire](#) for further research.
- Whether a local moratorium covers this site. Instruments recorded for the jurisdictions containing the point are listed in Appendix B, but their scope is set by their own text, which this report does not read.
- Transmission line proximity — substations only.
- Whether a substation is physically accessible, expandable, or has available bay positions.

This report is built to **rule out sites with no nearby transmission infrastructure**. A site with nothing in range is a defensible elimination. The reverse does not hold: proximity to the facilities listed above is not access to power, and nothing here establishes that a connection is available, affordable or achievable on any schedule.

JURISDICTIONS

US Census Bureau Geocoding Services — geographies by coordinates

<https://geocoding.geo.census.gov/geocoder/geographies/coordinates>

Retrieved 2026-10-04 · Public domain (US Government work)

Screening aid, not an engineering study. This report helps prioritize sites before committing to engineering due diligence. It is not a system impact study and carries no warranty. Underlying public datasets are published on their own schedules and may have changed since the retrieval dates shown above. Every figure in this report is reproducible from the cited sources; nothing is estimated, modelled, or generated.

A APPENDIX — INTERCONNECTION QUEUE DATA

Publicly-filed interconnection requests recorded at substations that are an exact name and county match to entries in section 2. Listed for convenience only: no relationship to your site is implied, and no conclusion should be drawn from the presence or absence of any project. Withdrawn, cancelled and otherwise terminal requests are included, and are listed after active ones.

These are name matches, not verified substation identities. Neither dataset publishes a shared identifier between HIFLD substations and ISO queue records. Confirm any row against the ISO before relying on it.

#3 PEARL — CLACKAMAS County, OR

Matched on substation name “PEARL” in CLACKAMAS County, OR. 1 request on file (0 active, 1 terminal) · BPA

QUEUE ID	STATUS	TYPE	CAPACITY	VOLTAGE	TARGET COD	PROJECT
G0528	WITHDRAWN	Battery/Energy Storage	150 MW	230 kV	2017-06-30	<i>not named</i>

Source: GridPulse interconnection queue snapshot (PJM serial + cycle views, ERCOT GIS Report, BPA interconnection queue) · snapshot taken 2026-09-22 · 11,938 requests · coverage BPA, ERCOT, PJM (25 states)

<https://www.pjm.com/planning/service-requests/services-request-status>

- PJM, ERCOT and BPA only. Absence of a project here is not evidence that no queue activity exists elsewhere.
- ERCOT GIS Reports are published monthly; ERCOT rows can lag the live queue by up to ~30 days.
- ERCOT omits the substation field on inactive and cancelled requests, so withdrawn projects can be listed for PJM but not for ERCOT.
- Substation strings are ISO free text extracted from point-of-interconnection fields, not a controlled vocabulary.
- BPA is the federal transmission provider for the Pacific Northwest and is not an RTO: its rows cover requests to interconnect to the Federal Columbia River Transmission System, not to Puget Sound Energy, Portland General, PacifiCorp or Avista systems.
- BPA point-of-interconnection strings sometimes name a transmission line rather than a substation; those rows cannot match a substation by name and are simply never attached.
- This snapshot contains GENERATION interconnection requests only. BPA large-LOAD requests are published separately in large-load-registry.json.

Further research: <https://substationscout.com/queue-wire/>

B APPENDIX — LOCAL MORATORIA

Local moratorium instruments — temporary pauses on accepting or approving certain development, most often data centers — as recorded in a third-party research dataset. Rows are reproduced as published; this report does not read the instruments themselves. This dataset tracks moratoria only — not project proposals, planning-commission reviews, or permanent zoning rules — so active local debate over a specific project will not appear here.

A recorded instrument is not a determination that this site is covered. Which applications, zoning districts and sectors an instrument reaches — and whether a county instrument applies inside incorporated municipalities — is set by its text. Confirm with the jurisdiction before relying on any row.

Jurisdictions containing this point

The dataset records no instrument for **Washington County, Beaverton-Hillsboro CCD, Wilsonville city**. That is a statement about moratoria only: a proposal under review or a planning-commission decision in these jurisdictions would not appear in it.

The publisher states its counts are lower bounds — small townships that do not post minutes online are the known gap — and that anything after 2026-09-23 is not included.

Within 25 miles

JURISDICTION	TYPE	STATUS	SECTORS	ADOPTED	ENDS	CENTROID
Woodburn, OR	City	active	data centers	2026-09-14	<i>n/r</i>	13.8 mi
City of Hillsboro, OR	City	active	data centers, battery storage	2026-07-27	<i>n/r</i>	16.6 mi

Distance is to the jurisdiction's centroid, not its boundary — a large county can begin much closer than the figure shown.

State-level actions — OR

ACTION	STATUS	MECHANISM	PROVISIONS AS RECORDED
HB 3546 (2025)	enacted	other	Creates a separate PUC service classification and tariff for large energy use facilities using or able to use 20 MW or more and primarily engaged in NAICS 518210 services; requires cost allocation or direct assignment to prevent unwarranted cost shifting to other customers; requires 10-year-plus contracts and minimum payment obligations; requires biennial PUC reports through 2035.

ACTION	STATUS	MECHANISM	PROVISIONS AS RECORDED
HB 4084 (2026)	enacted	statewide moratorium	Creates a Joint Permitting Council and fast-track permitting program for eligible economic development projects. As enacted, it also restricts enterprise-zone treatment for data centers: the extended exemption period may not apply to qualified property used in operating a data center, flexible hiring alternatives do not apply to data center property, and an eligible business firm may not be authorized for property consisting of a data center project before 90 days after the 2027 regular session adjourns. This is a tax-incentive authorization moratorium, not a construction moratorium.

5 state-policy actions tracked for OR in total; only those the publisher records as enacted or in force are listed. Where the publisher's legal-effect field reads “unknown”, the current effect of an enacted measure has not been checked by the publisher, and it is omitted here rather than guessed. 5 local instruments recorded statewide.

Source: Moratorium Data 2026 (Bommarito) — local moratorium inventory · current through 2026-09-23 · commit dbaab04d84f8 · 1,291 instruments · CC-BY-4.0 (data) — attribution: Bommarito, Michael J. (2026), Moratorium Nation
<https://github.com/mjbommar/moratorium-data-2026>

- Each instrument is tied to a Census county, county subdivision or incorporated place only when the Census places the publisher's own centroid inside a geography of the same name and kind. 70 of 1,291 rows could not be tied this way and do not appear in this appendix.
- The publisher compiles the dataset from municipal records and news coverage with AI-assisted research and documents its known gaps in the repository.
